

## Personalized Comparison of Survey Results for Greenox

This personalized market brief is based on data collected for Forest Trends' Ecosystem Marketplace's *State of the Voluntary Carbon Market 2014* report and is available to respondents who completed our survey by the early deadline and reported at least one transaction. We tracked a total of 76 million metric tonnes (MtCO<sub>2</sub>e) of carbon offsets transacted in 2013, for a market value of \$379 million US dollars. While our survey instrument attempts to capture all activity on the voluntary carbon market each year, keep in mind the limitations of survey-based research when looking at these figures.

### Overview

Your organization was in the top **10** offset suppliers globally, by transacted volume.

Your organization was in the top **5** offset suppliers in **developing countries**, by transacted volume.
